PROJECT

Age and Gender Detector model(Aug 2022)

Trained Age and Gender Detector model which could predict age and gender taking input image using ML.

(<https://github.com/yogita-github/Age-Gender-Detector-final>)

Counseling System for Human Health using ML (March 2023)

A project is trained using dataset of body vitals. It is trained using random forest classifier algorithm which takes the average to improve the predictive accuracy of that dataset. Tried with various svc algorithm, Naive Bayes Classifier and K-nearest neighbor algorithm but in case of rfc the accuracy was around 80%. The body vitals taken as input calculates the health status of a patient, based on the health status the detailed report is presented to the user.

EDUCATION

Godavari English Medium CBSE School

Completed Primary and Secondary Education

Shram Sadhana Bombay Trust College of Engineering and Technology Bambhori

Feb 2021 - Aug 2024

Course: Computer Science Engineering

Degree: BE

Profile

LinkedIn:
<https://www.linkedin.com/in/yogita-mahajan-189820213>

EXPERIENCE

techmihirnaik Group's

Role: Front-end Developer Intern

Worked as a Frontend Developer Intern on the official roommate website named Foodica and coordinated with the group to complete every task along with real industrial exposure and learnt different skills.

SKILLS

Programming: JavaScript, ReactJS, Python, Django, C, C++, HTML, CSS
Other: Github, Excel
